

Abstract

System and method of automated generation of access-controlled, personalized data and/or programs, a user (10,...,14) accessing a central unit (40) via a network (30/31) by means of a communication device (20,...,24) and

5 the access-controlled data and/or programs being transmitted to the communication device (10,...,14), logical records (421,...,423) being generated having data elements (4211,...,4214) divided according to authorization classes and the personalized, access-controlled data and/or programs being generated by means of a filter module (41) of the central unit (40) based on the

10 authorization class of the user (10,...,14) and on the access request data of the user (10, ..., 14). .

List of Reference Numerals

- 10,...,14 user
- 5 20,...,24 communication devices
- 30 network
- 31 mobile radio network
- 40 central unit
- 41 filter module
- 10 42 source database
 - 421,...,423 logical records
 - 4211,...,4214 data elements
- 43 clearing module
- 44 identification module
- 15 45 user database
- 46 data store
